

I want to build a personal web application called "Rex OS".

Rex OS is not a productivity app.

It is my personal Operating System and CEO Dashboard that helps me execute consistently on my long-term goals.

Its purpose is to eliminate decision fatigue and tell me exactly what I should work on next.

The application should feel like operating a startup rather than using a to-do list.

=====

DESIGN LANGUAGE

=====

Design inspiration:

- Linear
- Vercel
- Raycast
- Apple
- Notion Calendar
- Arc Browser

Style:

- Premium
- Minimal
- Modern
- Dark Mode by default
- Blue Accent
- Glassmorphism only where appropriate
- Beautiful spacing
- Soft shadows
- Smooth animations
- Rounded cards
- Professional typography
- Extremely clean UI

The application should feel expensive and distraction free.

=====

TECH STACK

=====

React

Vite

TypeScript

Tailwind CSS

Shadcn UI

Framer Motion

React Router

Recharts

The architecture should be modular and scalable.

=====

MAIN LAYOUT

=====

Persistent Left Sidebar

Top Navigation

Command Palette (Ctrl + K)

Responsive Design

=====

SIDEBAR

=====

Dashboard

Mission Control

Projects

Beat Library

Publishing

Content Calendar

Weekly Review

Monthly Review

Settings

=====

DASHBOARD

=====

The dashboard should answer only one question:

"How is Rex doing today?"

Display:

Greeting

Current Streak

Today's Main Mission

Next Action

Current Focus Session

Weekly Progress

Monthly Progress

Upcoming Deadlines

Recent Activity

Quick Notes

Beautiful statistic cards:

Videos Published

Beats Created

Beats Published

Beat Store Progress

Website Progress

Deep Work Hours

Current Weekly Score

Everything should be glanceable.

=====

MISSION CONTROL

=====

This is the most important page.

When opened it should immediately tell me:

Today's ONE Most Important Task

Secondary Tasks

Current Deep Work Session

Today's Progress

Completed Today

Next Action

Estimated Time Remaining

Quick Notes

Large button:

MARK TODAY COMPLETE

The page should encourage execution instead of planning.

=====

PROJECTS

=====

Each project should appear as a premium card.

Projects:

Rex Music

Beat Selling Website

Personal Brand

Each project contains:

Progress %

Milestones

Priority

Tasks

Deadlines

Status

Recent Activity

=====

BEAT LIBRARY

=====

Beautiful searchable table.

Columns:

Beat Name

Genre

Mood

BPM

Key

Duration

Cover Art

Video Theme

Status

YouTube

Spotify

BeatStars

Date Created

Search

Sorting

Filters

Status badges

Quick actions

=====

PUBLISHING

=====

Kanban Board

Columns:

Ideas

In Progress

Ready

Scheduled

Published

Each card contains:

Thumbnail

Title

Platform

Status

Publish Date

Priority

Estimated Time

Quick Actions

=====

CONTENT CALENDAR

=====

Monthly Calendar

Display scheduled content for:

YouTube

Instagram

Shorts

BeatStars

Spotify

Drag and Drop scheduling

=====

WEEKLY REVIEW

=====

Performance Score

Export Data

=====

GLOBAL FEATURES

=====

Command Palette

Global Search

Keyboard Shortcuts

Beautiful Empty States

Smooth Loading Animations

Dark Mode

Responsive

Reusable Components

Premium Tables

Premium Charts

Modern Cards

=====

MOCK DATA

=====

Populate the application with realistic mock data so every screen feels alive.

=====

DESIGN PHILOSOPHY

=====

This application should NEVER feel like a task manager.

It should feel like the operating system of a creative business.

Every page should answer one simple question:

"What should I do next to move Rex forward?"

Reduce decisions.

Reduce clutter.

Reduce friction.

Increase execution.

=====

IMPORTANT

=====

Do NOT build a basic CRUD dashboard.

Build something that feels polished enough to be featured on Dribbble or Awwwards.

Focus heavily on UX, micro-interactions, premium spacing, smooth animations, beautiful typography, and a professional SaaS experience.

Code should be clean, reusable, scalable, and production-ready.
